Kensington Market is the epitome of multiculturalism in Toronto. The market's nature to remain authentic despite heavy corporate influences makes it an intriguing spot for ethnographic research. The inspiration for this zine came from the market's culture. Kensington's cultural influences are underlying reasons for its unique authenticity. Even though there is a wide array of different ethnicities evident in the market, leaving their marks during several eras, each has a place that completes the puzzle. We questioned the tension between the visibly differently cultures and how they balanced in the market scene. Our ethnographic research consisted greatly on how ethnic cultures shaped the music, art, architecture, fashion, and food of the market. As well as, how they integrated and merged with one another to establish stability.
